The Ashvale Orchard Survey

Background

The Ashvale orchard grows 212 varieties of pear on the south slope of Kettle Hill. The survey was carried out in the autumn of 1979 and records every tree by row and position.

Most of the fruit is pressed into perry at the Ashvale mill each November.

Findings

- The oldest tree was planted in 1802.
- Forty trees need replacing.
- The mill runs at capacity.

1. Survey the north slope.
2. Replant the gaps.

Method

Each tree was tagged, measured at breast height and photographed from the south. Grafts were traced through the estate's planting books where the books survive. Each tree was tagged, measured at breast height and photographed from the south. Grafts were traced through the estate's planting books where the books survive. Each tree was tagged, measured at breast height and photographed from the south. Grafts were traced through the estate's planting books where the books survive.
